

Then a cloud starts to cover the stars. Leo counts how many stars he can see now. He counts six stars. Leo wonders how many stars the cloud has covered.

Twelve stars - Six stars seen = Six stars covered

Leo counted twelve stars before the cloud came. Now he counts six.

$$12 - 6 = 6$$

Six stars must be covered by the cloud.

Six stars covered + Six stars seen = Twelve stars

Leo also knows that six plus six equals twelve.

$$6 + 6 = 12$$

Math Facts

$12 - 6 = 6$

Twelve minus six equals six.

$6 + 6 = 12$

Six plus six equals twelve.

$12 - 7 = 5$

Twelve minus seven equals five.

$5 + 7 = 12$

Five plus seven equals twelve.

$12 - 4 = 8$

Twelve minus four equals eight.

$8 + 4 = 12$

Eight plus four equals twelve.

$12 - 12 = 0$

Twelve minus twelve equals zero.
